PROFESSIONAL SUMMARY

Full Stack Engineer with 3+ years of experience building and shipping production-grade SaaS platforms, hotel management systems, and AI-powered developer tools — solo and in team environments. Proven ability to architect complex systems end-to-end: real-time data pipelines, multi-tenant SaaS, no-code website factories, and AI orchestration tools. Currently focused on AI-augmented engineering — leveraging AI as a force multiplier to design, build, and deploy full-stack products at speed. **3 live production projects serving real users.**

LIVE PROJECTS (PRODUCTION)

NewWeb — No-Code Website & Mobile App Factory Solo-built · saucycreation.com (live client)

- Built a no-code platform that generates fully functional websites and native mobile apps from a single configuration — auth, database, admin panel, and pages included
- 1 live production client + 35+ demo and POC sites running on one shared engine — adding a new site requires zero code changes or deployments
- Includes AI-powered generation, visual drag-and-drop builder, and role-based access out of the box

Royal Suites — Full Hotel Management System Solo-built · royalsuitesnp.com · Live production

- **Guest experience:** Guests scan room QR → instantly authenticated → order food, track orders live, book spa, raise SOS service requests — zero front desk interaction required
- **Operations:** Real-time kitchen board via Socket.io; live inventory auto-deducts ingredients per recipe on every order; full spa scheduler with therapist Gantt view, slot engine, and auto-reschedule
- **Billing & Reservations:** All charges (room + food + spa) consolidated in one live bill — Stripe hold/capture, VAT, PDF receipts, discount system; online booking with flexible/non-refundable policies
- 6-role RBAC, analytics dashboard, occupancy tracking, Cloudinary media management

Next.js 14 Express MongoDB Socket.io Stripe Cloudinary Zustand Playwright Turborepo

Agentinbox — AI-Powered Bug & Task Automation Platform

Solo-built · useagentinbox.com · npm: agentinbox-mcp

- Built an open-source task inbox that connects non-technical clients to an AI coding agent — clients submit bugs via web form or Telegram, AI fixes them in the real codebase autonomously
- **Telegram integration:** Developer can control their entire codebase remotely from Telegram — send a message, AI executes the task on the live project without touching a laptop
- Real-time PM dashboard with WebSocket notifications, task audit log, submitted images, and AI-generated screenshots of completed fixes
- Published **agentinbox-mcp** npm package — MCP client that connects any project to the task queue with zero config
- Approval-gate mode: AI proposes fix plan, PM approves before any code runs

WORK EXPERIENCE

Associate Software Engineer2025 – Present

MBL (Account Opening & CMS System) · Kathmandu, Nepal

- Developing multi-step account opening forms using React and RJSF with custom UI schemas
- Reduced form submission errors by **30%+** through improved validation logic and conditional field rendering
- Collaborating with backend teams to integrate server-side validation across departments

Associate Software Engineer2024 – 2025

Focal Scope · Kathmandu, Nepal

- Built comprehensive admin dashboard for mobile app management — real-time user activity monitoring, app metrics, content moderation
- Designed interactive data visualization components using React and charting libraries
- Developed role-based admin controls with granular permissions; integrated RESTful APIs for live data sync

Associate Software Engineer — AOS & CMS2023 – 2024

Multiple Banks & Financial Institutions · Kathmandu, Nepal

- Delivered AOS and CMS systems across multiple banks and financial institutions in Nepal — working with regulated, enterprise-grade environments
- Built multi-role release management system with RBAC, version control integration, and workflow dashboards — cutting manual effort by **40%**
- Independently identified and rebuilt the RJSF form engine from scratch** after discovering critical performance issues:
 - Old engine: every keystroke triggered 30+ field re-renders; API calls caused full form unmount (300ms+ visible flash)
 - New engine: only 1 field re-renders per keystroke; **650 → 2 re-renders** inside complex arrays; zero remounts after API calls
 - Reduced JS boilerplate across 13 form steps from 18,227 → 1,757 lines (**–90%**)

OTHER NOTABLE PROJECTS

PROJECT	DESCRIPTION	STACK
HeloSarkar	Unified Digital Grievance Portal — Government of Nepal. Citizens file complaints routed to correct ministry/ward with role-based dashboards	Next.js 14, Express, MongoDB
Waiterless SaaS	Multi-tenant QR-ordering SaaS — customers scan, order, and pay without a waiter. Real-time Kitchen Display System	Next.js 14, Socket.io, Turborepo
HMS SaaS	Multi-tenant SaaS evolution of Royal Suites — any hotel can sign up and get the full HMS feature set	Next.js 14, Express, Stripe
Forex Trading Bot	Algorithmic trading bot — 3-timeframe Smart Money Concepts, Order Block zones, scored entry triggers, backtested 2023–2024	Python, MetaTrader5
NEPSE Tracker	Stock signal system with 100% out-of-sample win rate (16/16 trades) — daily automated pipeline via GitHub Actions	Python, GitHub Actions
Local AI + VS Code Ext.	Local AI coding assistant on RTX 3050 (4GB VRAM) — codebase-specialized model via system prompt injection (2,453 Q&A pairs auto-generated from 818 files), RAG pipeline, code knowledge graph, VS Code extension. LoRA fine-tuning dataset prepared (pending hardware)	Ollama, ChromaDB, DSPy, Python

PROJECT	DESCRIPTION	STACK
live-browser-mcp	Drop-in replacement for the official Playwright MCP — uses a persistent CDP connection instead of screenshots. 88% cheaper (~6,000 tokens vs ~50,000 per session). Fills entire forms in one call, auto-detects JS errors and network failures via live DOM stream. Built specifically to drive the custom RJSF form engine	TypeScript, MCP Protocol, Playwright, CDP

SKILLS

Frontend

- React.js
- Next.js 14
- TypeScript
- JavaScript ES6+
- React Native
- Tailwind CSS
- Framer Motion
- Ant Design
- Zustand
- RJSF

Backend

- Node.js
- Express.js
- REST APIs
- Socket.io
- WebSocket
- MCP Protocol

Database

- MongoDB
- Mongoose
- SQLite
- Turso
- SQL

AI & Automation

- Claude Code
- MCP Protocol
- Groq
- Ollama
- RAG Pipelines
- ChromaDB
- GitHub Actions
- Playwright

Payments & Tools

- Stripe
- eSewa
- Khalti
- Cloudinary
- Vercel
- Turborepo
- Expo/EAS
- Git
- Postman

Methodologies

- Multi-tenant SaaS
- RBAC
- AI Orchestration
- Agile
- Real-time Systems

EDUCATION

B.Sc. Computer Science & Information Technology

Prime College, Kathmandu

Grade: A

2019 – 2024

CERTIFICATIONS & TRAINING

- MERN Stack Certification
- Cisco Cyber Security
- Project Management Training
- Internship Certificate — Amnil Technology (2023)

LANGUAGES

Nepali — Native English — Professional working Hindi — Limited working
